

THE IDEAL DRIVING EXPERIENCE

Unlike other films that are made of metal or dye, Sun Barrier™ Nano Ceramic Window Film uses a double layer of the nano-ceramic technology to prevent heat and ultraviolet rays from entering as they can damage your car's interior. By obstructing both heat (infrared) and UV from penetrating through the windows, it ultimately provides comfort while driving. As they are produced using our latest nano-ceramic technology, it offers impeccable features without compromising visibility and privacy.
